

# Better, Faster, Easier Project Management Software.

RedTeam empowers your team to deliver better service and higher quality at lower cost!

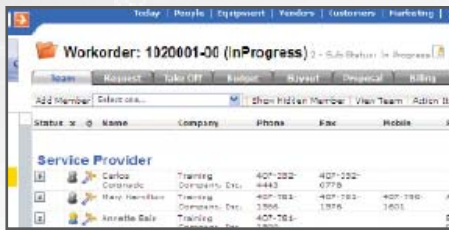

## Get organized. Be effective. Stay on track.

Manage your projects online, in real time, with RedTeam! RedTeam Software enables you to automate and streamline the activities of your people, processes and vital project information. By leveraging the efficiency of collaborative media, RedTeam empowers your customer, employee, and vendor relationships, while providing your business unprecedented levels of control and accountability.

## You'll wonder how you ever survived without RedTeam.

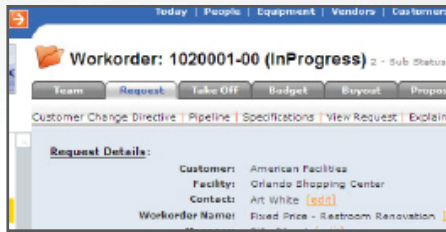

If you are still using legacy construction software, your people spend far too much time wrestling with arcane, back office applications to share documents, create contracts and track the progress of your projects. Transactions documented offline and after the fact are inevitably prone to being incomplete, inaccurate or simply too late to empower split-second front-line performance.

# Reduce paper and minimize undocumented verbal communication.

## Team Contacts

Instantly access contact information for every member of your team, including customers, employees, vendors and third party professionals.

## Scope of Work

Diligent control is essential to project success. RedTeam helps you manage scope of work from the initial request through final contract deliverables.

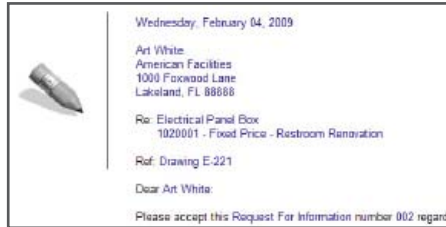

## Change Management

Decisions and requirements often change. Project changes can be quickly and easily documented, directives issued to vendors, and proposals issued to the customer.

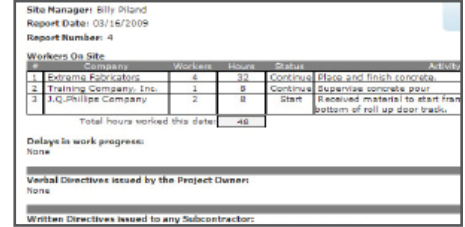

## Commitments

Generate Purchase Orders and Task Orders directly from RedTeam. Support vendor commitments as well as internal labor, equipment and miscellaneous expense authorizations.

## Dialog

All industry standard project correspondence is supported by RedTeam, including Letters, Meeting Minutes, Requests for Information (RFI) and Project Management reports.

## Progress Reporting

Document progress of work online using Daily Progress Reports, milestone schedules and schedule updates. Monitor anticipated versus actual contract completion dates to set clear expectations.

## Disbursements

Vendor invoices are routed electronically throughout the team for rules based approval. View the original document from any location, add notes and approve invoices for payment.

## Deliverables

Track every deliverable from request through approval. Manage and track items to be delivered pursuant to the contract, such as submittals, manuals, warranties and Leed certifications.

## Billing

Facilitate multiple billing methods, including applications for payment and time and materials billing. Invoice projects with schedule of values, retention, stored materials and percentage of completion.
